

GARS-3™

Gilliam Autism Rating Scale: 3rd Edition

Assists teachers, parents, and clinicians in identifying autism in individuals and estimating its severity.

Items on the GARS-3 are based on the 2013 diagnostic criteria for Autism Spectrum Disorder adopted by the APA and published in the Diagnostic and Statistical Manual of Mental Disorders - Fifth Edition (DSM-5).

Items and subscales reflect DSM-5 diagnostic criteria for Autism Spectrum Disorder. Forty-four new items were added to the GARS-3. All six subscales have been empirically determined to be valid and sensitive for identification of children with ASD. An interpretation guide in the Examiner's Manual provides the examiner an easy and efficient method for assessing the probability of Autism Spectrum Disorder and the severity of the disorder

Authors: James E. Gilliam, Ph.D.

Assists in identifying autism and estimating its severity in individuals 3 to 22

A diagnostic validation form is included for insuring that test results meet DSM-5 criteria for Autism Spectrum Disorder
